Vit Benton

vit@vitbenton.com | (954) 822-4035 | Miami–Fort Lauderdale Area | GitHub | LinkedIn

Full-stack web developer with 14+ years building for the web, specializing in front-end engineering with React and TypeScript. Experienced across SaaS, GovTech, e-commerce, and startups. Comfortable owning features end-to-end, from UX and architecture through testing and delivery. Thrives both independently and on cross-functional teams while consistently meeting deadlines.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, PHP, GO, SQL.
Frameworks & Libraries: React.js, React Native, Vue.js, Node.js, Next.js, Express.
Front-End: React Hook Form, Zod, Ant Design, Tailwind CSS, state management, responsive design, accessibility (WCAG).
APIs & Data: GraphQL, REST APIs, MySQL, MongoDB.
Testing: Jest, React Testing Library, Cypress, unit & integration testing.
Tools & Practices: Git, CI/CD, Figma, Agile (Scrum/Kanban), AWS.
AI-Assisted Development: Claude Code, MCP (Model Context Protocol), subagents, custom skills & slash commands, context engineering (project instruction files, spec/feature files, plan mode), agentic code review, Playwright MCP browser testing, LLM feature integration (OpenAI/Anthropic SDKs, structured outputs, prompt design).

RELEVANT WORK EXPERIENCE

Software Engineer — Alltus (Formerly Just Appraised Inc.), Remote *September 2025 – June 2026*

- Owned the front end for taxpayer- and processor-facing submission forms (change of address, exemptions) on a GovTech platform serving multiple U.S. county governments — building heavy, multi-step flows with dynamic per-jurisdiction validation and file uploads in React, TypeScript, React Hook Form, Zod, and Ant Design over a GraphQL API.
- Extended the Node.js backend — updating SQL queries against the database — to supply the data the forms needed, finishing front-end features end-to-end instead of handing off backend gaps.
- Hired onto a stalled three-county project with both front ends incomplete; led a full UX redesign and front-end re-architecture and delivered all jurisdiction requirements within three months.
- Introduced the team's first integration tests to secure critical UI flows, eliminating recurring cross-jurisdiction regressions caused by shared-form updates, and substantially raised unit-test coverage across the codebase.
- In an engineer-only organization, drove UX, testing, and engineering decisions end-to-end; championed a design-first workflow (Figma prototyping before implementation) and a consistent design language to support the company's GovTech brand goals.
- Improved accessibility (WCAG) across the form suite, using browser-based auditing extensions and AI tools to surface violations and drive targeted refactors of the React codebase — strengthening keyboard navigation, screen-reader support, and semantic markup.
- Used AI-assisted development (Claude Code) to rapidly build proofs of concept and prototype new form flows, accelerating exploration and validation.
- Active in pull-request and code reviews and engineering design discussions, partnering across teams to align shared form components with individual jurisdiction requirements.

Software Engineer II — JumpCloud, Remote *February 2022 – February 2025*

- Built and enhanced medium-to-large web applications in React.js and Vue.js — shipping new features, CRUD operations, and bug fixes while leveraging shared component libraries and state management.
- Led a Vue 2 to 3 migration: introduced TypeScript and Pinia, established typed contracts for micro-frontend compatibility, and reached ~90% test coverage across the migrated modules.
- Refactored legacy codebases to modern standards and applied TypeScript for type safety, improving performance and maintainability.
- Enhanced authentication flows with multi-factor (MFA) and passwordless login, improving security and user experience.
- Contributed to a micro-frontend architecture, supporting modular, scalable solutions across teams.
- Built reusable, accessible UI components meeting WCAG standards and translated high-fidelity Figma designs into pixel-perfect, responsive interfaces across modern browsers and devices.
- Wrote unit tests with Jest, maintained acceptance tests, and collaborated in Agile (Scrum/Kanban) with engineers, QA, PMs, and designers; also maintained cross-platform React Native apps for iOS and Android.

Web Developer II — System Soft Technologies, Remote *February 2021 – February 2022*

- Led remote front-end development with UI/UX designers under Scrum, delivering responsive, user-centric web applications for startups and enterprise clients.
- Built and maintained custom WordPress themes with third-party plugins and page builders (Elementor, Gutenberg), optimizing for SEO and performance.
- Wrote custom CSS and Tailwind CSS for maintainable, responsive UI components, and implemented PHP back-end functionality with WordPress API integrations.
- Maintained an internal time-keeping tool in React and TypeScript; mentored junior developers through code reviews and one-on-one technical guidance.

Web Developer & Designer — Battle Medialab, Boca Raton, FL *December 2017 – February 2021*

- Led web projects across web, video, and design teams; handling task delegation and direct client communication.
- Introduced React and modern JavaScript practices to interactive team, moving projects toward component-based frontends.
- Developed full stack application with HTML5, CSS3, JavaScript, PHP, Node.JS, and MySQL in addition to client builds on WordPress, Drupal, and Magento.
- Deployed and configured AWS EC2 Linux servers and RDS databases in addition to security groups, SSH access, and scalable data storage.

Web Developer & Content Manager — OutstandingEyewear, Deerfield Beach, FL *June 2012 – December 2017*

- Solely managed BigCommerce store operations including SEO, web design, inventory control, and customer account management.
- Customized HTML, CSS, and JavaScript to align design and functionality with brand identity, and optimized product layouts for conversion and search visibility.
- Directed in-house product photography and media production, from studio setup through editing.

EDUCATION

Full Stack Web Development Certification — University of Central Florida, Orlando, FL (May – December 2017)

24-week intensive program: JavaScript, React.js, Node.js, Express, MySQL, MongoDB, REST APIs, responsive design, and Git.

Bachelor of Arts in English, Minor in Philosophy, Cum Laude — Florida Atlantic University, Boca Raton, FL (2009 – 2011)

Associate of Arts in English — Broward College, Coconut Creek, FL (2007 – 2009)
